## DETAILED ACTION

### ***Claim Rejections - 35 USC § 103***

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1-23 rejected under 35 U.S.C. 103(a) as being unpatentable over Tsuboyama (U.S. 4,744,639). Tsuboyama discloses a ferroelectric liquid crystal device having a flattening layer. This flattening layer consists of orientation control portions 36 and spacer members 38. See figures 3A and 3B. Tsuboyama teaches forming the flattening layer using a number of organic materials such as acrylic resin. See column 6, lines 25 – 35. Figures 4A and 4B show an example of the spacers being formed of different material than the orientation control layer. It is common knowledge within the art that the orientation control layer can be formed from inorganic material as well as organic material. Although Tsuboyama does not disclose a light shielding region, light shielding layers were notoriously well known and obvious for the purpose of preventing light leakage in order to obtain good contrast. Therefore, it would have been obvious to those of ordinary skill in the art at the time of invention to add a light shielding layer to the liquid crystal display device of Tsuboyama in order to achieve better contrast.
